

Valued Customer,

Re: Sustainability/Recyclability of packaging materials

This letter is in response to your request for information regarding our efforts toward sustainability, and/or information regarding the recyclability of Pinnpack packaging materials.

All containers, lids, clamshells and trays produced by Pinnpack are manufactured from Polyethylene Terephthalate (PETE) sheet that is safe for food contact as per the FDA's 21 CFR 177.1630, which is 100% recyclable.

Pinnpack Packaging products are indicated with recycling code 1 – PETE

The raw material used is typically a blend of virgin PETE resin, Post Consumer Recycle PET and our own internal closed-loop recycle, or regrind which does not come from external sources, rather it results from our forming operation.

Additionally, Pinnpack may employ use of up to 100% post-consumer recycled (PCR) polyethylene terephthalate (PET) processed in compliance with the letters of Non Objection issued by the FDA as suitable for use in food contact packaging under specified conditions described in FDA groups (a) through (h), and (j).
